

Ms. Teresita Pamela Liao

Senior Environmental Management Specialist, Environmental Management Bureau
Philippines

We need a concrete national programme to address terrorist activities on chemical, biological and nuclear weapons of mass destruction. Does anyone have experience in this area? We need assistance in our country in addressing issues related to accountability for exports/imports of hazardous chemical substances as the Philippines is becoming a harbour for terrorist activities. Most of us are experts on chemicals and need to come up with concrete programmes to deal with the proliferation of hazardous chemicals.
